CLAIM

What I claim as my invention is: A marble and dice game board apparatus, which I have named "Blind Choice". It is a marble and dice board game consisting of one board game piece. This board game piece is 16" wide by 16" long. It consists of four outer black borders, each with the name "Blind Choice" printed in white lettering. It is divided into four triangular sections. Each section has its own color which are blue, red, green and yellow. Each triangular section has twenty-five perforations. The perforations are in rows forming the shape of a pyramid. Each perforation will perfectly fit a standard size marble. At the center of this board is a white circular area with eight perforations in a circle for eight white marbles. Inside this white circular area is a black circle with one perforation in the exact center of the game board.

My marble and dice board game consists of, one game board, one die, one cloth bag for marbles, one set of rules, one black marble, eight white marbles and one hundred additional marbles, twenty-five of each of the following colors; blue, red, green and yellow. This makes a total of one hundred and nine marbles.

I regard my invention as unique. I have reviewed many other board games but have never seen anything that comes close to my invention.

Jack Martin
